AI Support Knowledge Base | bounded tests

Actual offline regression result after restoring declared dependencies. Model and vector-store boundaries are mocked;
the synthetic sample uses real local SQLite.

```
{
  "command": "python -B -m pytest tests/ examples/support_workflow/tests/ -q",
  "result": "17 passed, 3 warnings, 5 subtests passed in 5.83s",
  "focusedSampleTests": 9,
  "integrations": "Existing model and vector-store tests use mocks; no live API quality is proved.",
  "warnings": "Three existing LangChain dependency deprecation warnings.",
  "provenScope": [
    "original document loading",
    "mock QA and vector boundaries",
    "duplicate delivery and payload rejection",
    "invalid input and missing documentation",
    "simulated timeout and durable restart recovery",
    "explicit local review; zero outbound actions"
  ]
}
